

Project Proposal

Initial Draft

I. Project Title

School Canteen Daily Lunch Budget Evaluation

II. Problem Statement

Many students of PSHS-BRC usually receive a fixed daily allowance or a monthly stipend, but struggle to budget their expenses at the school canteen. Those who rush to finish their lunch, especially Grade 8 scholars who only have 50 minutes of lunch, find themselves unconsciously spending more on snacks, drinks, and meals, leaving them short on cash before the school week ends. This program proposal offers a highly simplified lunch budget tracker for a single day's lunch, designed to help students calculate their expenses for the day and monitor their remaining cash.

III. Project Objectives

1. Budget and Cost Entry

- To accept inputs of the student's daily allowance, meal cost, and/or drink expenses.

2. Computation

- To take the initial budget and subtract it from the total amount of expenses, which is calculated by adding the meal cost and the optional drink cost.

3. Final Evaluation

- To run an if/else statement that will evaluate the final balance and display a corresponding success text or overspending warning.

IV. Planned Features

1. Daily Allowance Input

- A simple starting prompt asking the student to input the amount of allowance they have for the day.

2. Canteen Expenses Addition Calculator

- A calculator that adds up the total cost of the main meals and additional items.

3. Final Balance Evaluator

- Uses a simple if/else statement that evaluates whether the student's final balance is positive or drops below zero.

V. Planned Inputs and Outputs

• Planned Inputs

1. Daily allowance in Philippine Pesos as a float data type.
2. Cost of the main lunch meal as a float data type.
3. Cost of additional expenses like drinks and snacks, as a float data type or 0 if no additional items are bought.

• Planned Outputs

1. Total combined cost of canteen purchase in float data type.
2. Remaining cash balance.
3. Clear status message reading either a budget text or exceeds budget text.

VI. Logic Plan

```
START
OUTPUT "Enter your daily cash budget (Php): "
INPUT FLOAT daily_budget
OUTPUT "Enter the cost of your lunch meal (Php): "
INPUT FLOAT meal_cost
OUTPUT "Enter to cost of your drink/snack (Php): "
INPUT FLOAT drink_cost
SET FLOAT total_cost = meal_cost + drink_cost
SET FLOAT remaining_balance = daily_budget - total_cost

OUTPUT "Total Lunch Cost:", total_cost
OUTPUT "Remaining Balance:", remaining_balance
```

Coding in a Connected World: Development of Computational Thinking Skills

QUARTER 1

```
IF remaining_balance >= 0.0 THEN:
    OUTPUT "Within budget."
ELSE:
    OUTPUT "Exceeds budget. You have spent more than your
    daily limit."
END IF
END
```
